

## AUDIO NOTE (UK) LOUDSPEAKER VENEERS

All of our AN-K, AN-J and AN-E loudspeakers are finished in premium quality, responsibly sourced 'book matched' real wood veneers. As one would expect from a natural product, each veneer is different and distinct, and no two pairs are exactly the same.

Over time, the cabinets will slightly change in colour, due to the effects of sunlight and UV light. Some veneers develop stronger figuring; some become darker, others lighter. Some develop new and interesting shades in their grain colours. These changes are completely normal and natural, and add to the beauty and individuality of each pair of 'speakers.

Our standard cabinet finish is Satin, but High Gloss lacquer finishes are also available at extra cost, and most of our standard wood veneers can be supplied in this deep, lustrous automotive quality finish.

We are also able to provide solid colour paint finishes at extra cost, matching any RAL shade of your choice. These paint finishes are available in Satin or High Gloss.

We can now also offer real SLATE as a finish, at extra cost.

*The examples of our available veneers on the following pages are intended to be A GUIDE ONLY, and as described above, your final 'speakers may be slightly different due to the inherent properties of natural, real wood veneer.*
